PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years of experience in backend development, API design, and third-party integrations. Specialized in PHP, Laravel, and Node.js, with experience in MCP server development and full-stack technologies including React and Next.js.

At Cloudstack, I contribute to the development of We-Connect, working on new features, CRM integrations, Stripe billing, AI service integrations, background jobs, WebSocket functionality, and API performance optimization.

EXPERIENCE

Senior Software Engineer • Full-time
Cloudstack | Nov 2024 – Present • Promoted from Software Engineer, Aug 2026

- Contributed to the development and enhancement of the We-Connect platform, including new backend features and improvements to existing functionality
- Designed and developed the We-Connect MCP server using Node.js, enabling integration with the existing Laravel backend.
- Worked on third-party integrations with HubSpot, Zoho CRM, Salesforce, and Slack to support data synchronization and automated workflows.
- Enhanced the billing system by integrating Stripe add-on purchases and credit purchases alongside existing subscription plans, including feature access management based on add-ons and seat allocations.
- Implemented background job processing for selected features to improve processing efficiency and support asynchronous operations.
- Worked on WebSocket integrations to support real-time communication and updates.
- Integrated internal AI services into additional platform features to extend automation capabilities.
- Optimized existing APIs to improve response times and overall application performance.
- Contributed to customer ticket resolution by investigating issues, troubleshooting backend functionality, and implementing fixes.

Software Engineer • Full-time
Zil Money | Apr 2022 – Oct 2024

- Built and maintained backend systems for a US fintech product serving thousands of users.
- Integrated third-party financial APIs and payment gateways; developed a credit wallet system from the ground up.
- Managed subscription and billing pipelines integrating Zoho Subscriptions.
- Designed and maintained RESTful APIs consumed by web and mobile clients; ensured API reliability and versioning.
- Integrated QuickBooks (Online & Desktop), Zoho Billing & Books.

PERSONAL PROJECTS

Peedia — E-Commerce Platform with WhatsApp Bot Automation

- Full-stack e-commerce platform with multi-vendor support — Laravel backend, Node.js microservice, React + Next.js frontend.
- Built a full chat-commerce WhatsApp bot — customers can browse products, place orders, and complete payments entirely within WhatsApp, without visiting the website.
- Multi-tenant architecture with custom domain and subdomain support — fully automated provisioning per store.
- Integrated multiple payment gateways, giving merchants flexibility to accept payments through different providers.
- Supports customizable themes, allowing each store to have its own branded look and feel.
- Architected the system with isolated data per tenant, role-based access control, and real-time order tracking.

  Demo Store: https://pixvolt.peedia.online/
  Bot: WhatsApp BOT

Tune Wave — Ad-Free YouTube Music Player

- Developed a music player with a React and Tailwind CSS frontend and Laravel backend, with Telegram bot integration for song management.

E-Park — Library Management System

- Developed a library management application using Laravel, Bootstrap, and jQuery to manage books, members, book transactions, fines, and reports.

En-ML Telegram Bot — English to Malayalam Dictionary

- Built a Telegram bot using Laravel and Open-source OLAM dictionary data to provide English-to-Malayalam translations and word suggestions
